## Nut Harvest Equipment

### GOT ROCKS? Remove them with the **ROCK SEPARATOR**<sup>SM</sup>

Each year, hullers and shellers experience excessive damage to elevators, augers and pre-cleaner equipment due to rocks, clods and other abrasive debris...material that could have been left in the field.

Using the **Rock Separator**<sup>SM</sup>, by Legacy Industries, huller and shellers benefit by:

- **Reducing maintenance and repair costs** — reduces excessive damage to the pit, elevators, augers and other pre-cleaner equipment
- **Increasing production** — increases product flow by decreasing processing down time

Growers and harvesters benefit by:

- **Reducing trucking and hulling costs** — by removing rocks and large debris in the field, a full load of almonds can be hauled and hulled vs. a significant mixture of both. Since loads won't excessively damage processing equipment, hullers are more likely to accept the delivery.

Improve your almond processing operation by putting the **Rock Separator**<sup>SM</sup> by Legacy Industries to work for you!
